DETAILED ACTION**RCE**

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on July 24, 2003 has been entered.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-5, 13-22, 29-38 and 41-43 are rejected under 35 U.S.C. 103(a) as being unpatentable over **Colley** or **Born** et al in view of **Lobb** et al (5,810,680).

Regarding claims 1-5, 13-22, 29-38 and 41-43, Colley or Born teach the limitations of the claims as discussed in the previous office actions (papers #12 and #15), incorporated herein by reference. Colley or Born are silent regarding the newly added claim features of the data input means being provided with respective location data indicative of a respective location thereof in terms of said phases so that said respective location data is available electronically to said respective data input means during the phase of said sport or game with which said respective data input means is

associated *without being entered during said sport or game* and said system being configured to transmit progress data and respective location data of the data input means. Lobb teaches an input unit that has a GPS tracked input unit that has these features (abstract; Fig. 1; Fig. 2 and Fig. 2A and Fig. 5A). It would have been obvious to a person of ordinary skill in the art at the time of the invention to include these features, as taught by Lobb, in the input means of Colley or Born to make the system more convenient for the user, whereby game play does not have to be interrupted to enter pertinent data. This would increase speed of play and make gaming more enjoyable.

Claims 6-12, 23-28 and 39-40 are rejected under 35 U.S.C. 103(a) as being unpatentable over **Colley** or **Born** et al in view of **Lobb** et al (5,810,680), further in view of **Lyon**.

Regarding claims 6-12, 23-28 and 39-40, Colley or Born in view of Lobb teaches all the limitations of the claims as discussed above. The references lack the explicit disclosure of the data card and reader. However, as discussed in the previous office actions (papers #12 and #15), incorporated herein by reference, Lyon teaches this feature. It would have been obvious to a person of ordinary skill in the art at the time of the invention to combine the similar golf score keeping teaching of Lyon with the golf devices of Colley, Born and Lobb to make it easier for the users to store and keep track of their scores.

Examiner's Response to Applicant's Remarks

Applicant argues that Colley, Born and Lyon do not teach the newly added claim limitations. The examiner has cited Lobb to teach these features (see above). Therefore, Applicant's arguments are now moot in light of the new claim rejections.
